Например, кнопка

```
public render() {
  const props = this.props;
  switch (props.buttonType) {
    case ButtonType.command:
      return <CommandButton { ...props } />;
     case ButtonType.compound:
      return <CompoundButton { ...props } />;
    case ButtonType.icon:
      return <IconButton { ...props } />;
    case ButtonType.primary:
      return <PrimaryButton { ...props } />;
    default:
      return <DefaultButton { ...props } />;
  }
}
```

74

А теперь с bem-react-core

Декларативно!

```
<Button compound primary icon="check"></Button>
```
